Education

Schulich School of Engineering, University of Calgary

- Master of Engineering in Software
- Bachelor of Science in Electrical Engineering

Skills

- **Languages:** TypeScript, JavaScript, Python, SQL, HTML, CSS, Bash
- **Testing & Automation: Playwright, Cypress, Postman, BrowserStack, Qase, REST APIs**
- **Development: React, Next.js, Django**
- **Data: PostgreSQL, MySQL, MongoDB**
- **Tools & CI/CD: Git, GitHub Actions, Docker, Jira, OpenAI, Gemini**

Experience

Software Quality Assurance Analyst Feb 2024 - Present

Showpass, Calgary, AB

- Led the migration of legacy Cypress test suites to Playwright, designing reusable test architecture patterns and automating critical user flows to improve release confidence.
- Developed internal QA tools to improve automated test visibility and streamline testing workflows.
- Designed and executed release validation strategies to identify risks and improve deployment confidence.
- Applied AI-assisted workflows to accelerate test development, debugging, and repetitive QA tasks.
- Built Playwright CI pipelines in GitHub Actions to execute parameterized test suites triggered during release validation.
- Investigated test and application failures, traced root causes, and contributed code fixes to improve product stability.

Graduate Research Assistant Jun 2023 - Apr 2024

Biometric Technology Lab, Calgary, AB

- Improved breathing-pattern detection accuracy by 10% through machine learning experimentation and software refinement.
- Developed computer vision software to automate human-movement tracking from video data.
- Built data-processing tools to clean sensor data and improve research accuracy and processing efficiency.
- Documented technical implementations and presented research findings to project stakeholders.

Software Quality Assurance Intern Jul 2021 - Apr 2023

Computer Modelling Group Ltd., Calgary, AB

- Developed Python automation scripts for test data collection, reporting, and validation workflows.
- Implemented scheduled test execution to reduce repetitive manual validation work.
- Built automated tests to detect memory leaks and performance regressions.
- Executed release validation to identify defects and verify product stability.
- Contributed to version control and software development workflow improvements.

Projects

QA Tool Box | React, Tailwind, Shadcn

- Built a centralized QA toolkit with reusable resources and utilities to streamline common testing workflows and reduce repetitive work.

Habit Tracker (In Progress) | React, Next.js, Supabase, Tailwind, Shadcn

- Developing a full-stack productivity application for habit tracking, spending visibility, and daily activity management.

Church Website | React, Next.js, Supabase, Django, Chakra UI

- Developed and deployed a full-stack website with responsive event pages, contact forms, and media-management tools.
